SAFE STEPS HOUSE FIRE PILLARS

1. Remove the Decision-Making Process

In a fire, seconds matter and hesitation kills. Clear, preplanned actions eliminate confusion and panic. When every family member knows exactly where to go and what to do, movement is immediate and controlled—even in darkness and smoke.

2. Early Detection and Immediate Action

Fire outcomes are determined by how quickly danger is detected. Properly placed, interconnected alarms provide the earliest possible warning. Early detection turns a deadly surprise into a survivable escape.

3. Smoke Management and Door Control

Smoke is the primary killer in residential fires. Closed doors slow smoke spread, preserve breathable air, and buy critical time. Simple door control decisions can mean the difference between escape and entrapment.

4. Clear, Redundant Egress

Every room must have a primary and secondary way out. Doors, windows, ladders, and pathways are planned in advance. Redundant escape options prevent single points of failure when conditions change.

5. Role-Based Movement and Accountability

Children and dependents do not self-evacuate effectively. Clear adult roles ensure fast collection, movement, and accountability. No one guesses who is responsible for whom—everyone knows.

6. Rehearsal, Muscle Memory, and Calm Under Stress

Fire creates darkness, noise, and disorientation. Regular rehearsals build automatic movement and confidence under stress. Families who practice do not freeze—they move.

SAFE STEPS HOUSE FIRE PILLARS

7. Do Not Fight the Fire

The objective is survival, not suppression. Fire extinguishers are used only when conditions are safe and escape is guaranteed. If there is any doubt, evacuation takes priority over property.

10. After-Action Review and Incremental Improvement

Every drill or real event is an opportunity to improve. Short, honest reviews identify what worked and what failed. Small corrections compound into long-term safety.

8. External Rally and Accountability

Families reunite at a known, safe location outside the home. Accountability prevents dangerous reentry and gives responders accurate information. Once outside, no one goes back in.

11. Post-Incident Safety and Recovery

Survival does not end at the curb. Knowing how to interact with firefighters, insurance, and inspectors prevents secondary harm. Reentry only occurs when the structure is declared safe.

9. Maintenance and Lifecycle Readiness

Fire safety systems degrade over time. Alarms, batteries, extinguishers, and escape tools are checked regularly. Equipment that isn't ready is treated as nonexistent.

1 Surrounding Area

Neighbors: Home has neighbors on both sides and across the street, but none to the rear. Door-to-door distance to closest neighbor is 40 meters. Limited direct line of sight to left and right neighbors. Substantial line of sight across street. Trees separate home from neighbors, but easily passable.

Geography: Substantial dense woodlands to the rear, interspersed trees throughout property, and light vegetation between neighbors. Terrain is generally flat and well-manicured with no substantial landscape features serving as obstacles.

2 Perimeter Access

Access: Home has no fence. No landscaping features restrict foot travel. Rear of property backs up to dense woods with no easy vehicle access.

3 Egress Points

Doors: Home has 4 doors: 2 inward-opening wooden doors, 1 sliding glass door, 1 garage door.

Windows: Ground floor has 9 accessible windows. All open vertically with plastic locks. Glass approximately 1/4-inch thick. All contain screens. Second floor has 5 accessible windows: three lead to 12-foot-high sub-roof level.

4 Family

Members: Homeowners are 40 Male and 39 Female. Three children aged 4, 7, and 9.

5 House Construction

Structure: Wood-frame construction — faster fire spread and earlier structural failure

Insulation: Fiberglass batt — dense, toxic smoke develops quickly

Roof: Asphalt shingle over plywood — rapid attic fire spread once involved

Stairwell: Open interior stairwell — smoke rises fast to bedrooms

Heating: Natural gas — fire intensifies if gas not isolated

6 Potential Fire Sources

Electrical: Likely from aging or overloaded wiring; high potential for rapid spread and early smoke

Cooking: Likely from unattended stovetop or grease fires; fast smoke production

Heating: Likely from space heaters or gas appliances; elevated nighttime risk

Open Flame: Likely from unattended candles/fireplace; localized ignition with delayed detection

Human Error: Likely from accidental misuse of appliances; unpredictable ignition timing

7 Conclusion

The home's wood-frame construction, open interior stairwell, and fiberglass insulation create conditions for rapid fire and smoke spread, particularly toward second-floor sleeping areas. The presence of young children significantly increases evacuation time requirements, making early detection and immediate movement critical. Electrical and cooking-related incidents represent the most likely ignition sources, with smoke inhalation posing the primary life threat. Limited rear access due to dense woodlands reduces fire department approach options and increases reliance on self-evacuation. Overall risk is driven less by the likelihood of ignition and more by the speed at which conditions become untenable without a rehearsed, role-based evacuation plan.

FIRE MOVEMENT AND SURVIVAL PRINCIPLES (1 of 2)

1. Crawl Low Under Smoke

Smoke and toxic gases rise first; breathable air is lowest near the floor. Stay as low as possible when moving through smoke-filled areas to maintain access to breathable air.

4. Maintain Wall Contact

In zero-visibility conditions, maintain physical contact with walls or baseboards to navigate. Tactile navigation prevents disorientation when smoke eliminates all visual reference points.

2. Check Doors Before Opening

Use the back of your hand to check doors for heat before opening. Heat transfer through the door indicates fire on the other side. Never open a hot door—find an alternate route.

5. Do Not Open Windows

Do not open windows unless using them to escape. Opening windows can introduce oxygen that accelerates fire growth and changes fire behavior unpredictably throughout the structure.

3. Close Doors Behind You

Closed doors slow smoke and fire spread and preserve survivable air in the rooms beyond. Every closed door between you and the fire buys critical time for escape.

6. Use the Nearest Safe Exit

Use the nearest safe exit, not the familiar one. Fire blocks paths unpredictably—conditions dictate movement, not habit. Always have multiple exit routes planned in advance.

FIRE MOVEMENT AND SURVIVAL PRINCIPLES (2 of 2)

7. Seal the Room If Trapped

If escape routes are blocked, close the door, block gaps with towels or clothing, open a window slightly for air, and signal visibly for rescue. A sealed room buys critical survival time.

10. Signal from Windows

Firefighters locate victims faster through visible, repeated signals. Use light, movement, or bright fabric from windows to attract attention and communicate your location.

8. Keep Doors Closed While Sleeping

Closed doors dramatically reduce smoke and heat exposure during nighttime fires. A closed bedroom door can be the difference between waking to an alarm and being overcome by smoke.

11. Stay Together During Evacuation

Separation during evacuation increases confusion, delays accountability at the meeting point, and increases overall risk. Move as a group when conditions allow.

9. Shut Off HVAC If Accessible

Running HVAC systems can spread smoke rapidly through the entire home via ductwork. Shut off systems only if immediately accessible—do not delay evacuation to reach controls.

SAFE STEPS PLAN: FLOOR PLAN

SAFE STEPS PLAN: YELLOW BRICK ROAD

Task: Ensure accountability while exiting as quickly as possible

Condition: Smoke/flame not blocking movement

Standard: Evacuated in 90 sec, 911 within 3 min

Trigger: Anyone sees smoke or flame

SAFE STEPS FIRE ESCAPE PLAN YELLOW BRICK ROAD SCENARIO: SMOKE NOT BLOCKING MOVEMENT

SAFE STEPS PLAN: YELLOW BRICK ROAD

**STEP
1**

ALERT

Alert all occupants as quickly as possible that a plan will be executed

Dad Yell “Yellow Brick Road”

Mom Yell “Yellow Brick Road”

Age 11 Yell “Yellow Brick Road”

Age 9 Yell “Yellow Brick Road”

Age 6 Yell “Yellow Brick Road”

SAFE STEPS PLAN: YELLOW BRICK ROAD

**STEP
2**

ASSESS

Adults determine if the fire can be fought and children move to internal rally points (green dots)

Dad	Can the fire be fought safely with an extinguisher or fire blanket? If yes fight it. Any doubt—go to Step 3.
Mom	Can the fire be fought safely with an extinguisher or fire blanket? If yes fight it. Any doubt—go to Step 3.
Age 11	Go to the nearest green dot on the level you are currently on. Wait there.
Age 9	Go to the nearest green dot on the level you are currently on. Wait there.
Age 6	Go to the nearest green dot on the level you are currently on. Wait there.

SAFE STEPS PLAN: YELLOW BRICK ROAD

STEP
3

ACCOUNTABILITY

Confirm internal accountability so no one stays inside looking for someone already out. Alert first responders.

Dad	Run the Yellow Brick Road. At each green dot, confirm who's there. Direct to nearest exit or take them with you.
Mom	Go to a green dot. Call 911. Follow dad. Go to whichever exit he directs you to. Head straight to 2324 mailbox.
Age 11	Follow dad. Go to whichever exit he directs you to. Head straight to 2324 mailbox.
Age 9	Follow dad. Go to whichever exit he directs you to. Head straight to 2324 mailbox.
Age 6	Follow dad. Go to whichever exit he directs you to. Head straight to 2324 mailbox.

SAFE STEPS PLAN: YELLOW BRICK ROAD

**STEP
4**

MOVEMENT

Exit the house in an orderly fashion based on Dad's instructions.

Dad Exit through the nearest door along the Yellow Brick Road: front door or workshop back door.

Mom Exit through the door Dad directed you to. Head straight to 2324 mailbox.

Age 11 Exit through the door Dad directed you to. Head straight to 2324 mailbox.

Age 9 Exit through the door Dad directed you to. Head straight to 2324 mailbox.

Age 6 Exit through the door Dad directed you to. Head straight to 2324 mailbox.

SAFE STEPS PLAN: YELLOW BRICK ROAD

STEP 5

RALLY POINT

Establish external accountability

Dad Meet at the mailbox. No one goes back inside.

Mom Meet at the mailbox. No one goes back inside.

Age 11 Meet at the mailbox. No one goes back inside.

Age 9 Meet at the mailbox. No one goes back inside.

Age 6 Meet at the mailbox. No one goes back inside.

SAFE STEPS PLAN: YELLOW BRICK ROAD

STEP
6

FIRST RESPONDER

If unable to call 911 in step 3, now you call. Prepare emergency response sheet for fire fighters.

Dad Call 911 if not already called. Hand emergency response sheet to firefighters.

Mom Call 911 if not already called. Hand emergency response sheet to firefighters.

Age 11 —

Age 9 —

Age 6 —

SAFE STEPS PLAN: ALAMO

Task: Exit if possible. Collapse to designated shelter location if possible. Shelter in place. Signal to first responders

Condition: Used when smoke or fire is blocking exits or movement through the home

Standard: All occupants sheltered or evacuated within 60 seconds of alert; first responders called within 3 minutes

Trigger: Anyone sees smoke or flame blocking movement, or hears "Alamo"

SAFE STEPS PLAN: ALAMO

**STEP
1**

ALERT

Alert all occupants that exits may be blocked and the Alamo plan will be executed

Dad Yell "Yellow Brick Road"

Mom Yell "Yellow Brick Road"

Age 11 Yell "Yellow Brick Road"

Age 9 Yell "Yellow Brick Road"

Age 6 Yell "Yellow Brick Road"

SAFE STEPS PLAN: ALAMO

**STEP
2**

Assess

Each occupant checks their door before moving. This determines which branch to take in step 3.

Dad	Feel door with back of hand. Check for smoke along door seam. If heat or smoke, shelter. If neither, exit.
Mom	Feel door with back of hand. Check for smoke along door seam. If heat or smoke, shelter. If neither, exit.
Age 11	Feel door with back of hand. Check for smoke along door seam. If heat or smoke, shelter. If neither, exit.
Age 9	Feel door with back of hand. Check for smoke along door seam. If heat or smoke, shelter. If neither, exit.
Age 6	Feel door with back of hand. Check for smoke along door seam. If heat or smoke, shelter. If neither, exit.

STEP
3A

Movement (Exit)

Door check reveals no heat or smoke. All occupants exit through their designated primary route.

Dad Exit via closest exit. Go directly to 242 mailbox

Mom Exit via closest exit. Go directly to 242 mailbox

Age 11 Exit via closest exit. Go directly to 242 mailbox

Age 9 Exit via closest exit. Go directly to 242 mailbox

Age 6 Exit via closest exit. Go directly to 242 mailbox

STEP
3B

Movement (Collapse)

Hallway passable but primary exit blocked. Occupants collapse to a single room to exit together.

Dad Stay in your room.

Mom Stay in your room.

Age 11 Go to Lucas's room.

Age 9 Go to Lucas's room.

Age 6 Stay in your room.

SAFE STEPS PLAN: ALAMO

**STEP
3C**

Movement (Shelter)

Heat or smoke detected at door. Cannot exit safely. Each occupant shelters in their current room.

Dad Stay in your room.

Mom Stay in your room.

Age 11 Stay in your room.

Age 9 Stay in your room.

Age 6 Stay in your room.

**STEP
4A**

Shelter (Exit)

Ensure survivability for time it takes first responders to arrive and signal location for quick extraction.

Dad N/A

Mom N/A

Age 11 N/A

Age 9 N/A

Age 6 N/A

**STEP
4B**

Shelter (Collapse)

Ensure survivability for time it takes first responders to arrive and signal location for quick extraction.

Dad 1) shut door 2) open window 3) grab whistle 4) place 1 green dot per person on window

Mom 1) shut door 2) open window 3) grab whistle 4) place 1 green dot per person on window

Age 11 1) shut door 2) open window 3) grab whistle 4) place 1 green dot per person on window

Age 9 1) shut door 2) open window 3) grab whistle 4) place 1 green dot per person on window

Age 6 1) shut door 2) open window 3) grab whistle 4) place 1 green dot per person on window

SAFE STEPS PLAN: ALAMO

**STEP
4C**

Shelter (Shelter)

Ensure survivability for time it takes first responders to arrive and signal location for quick extraction.

Dad 1) shut door 2) open window 3) grab whistle 4) place 1 green dot per person on window

Mom 1) shut door 2) open window 3) grab whistle 4) place 1 green dot per person on window

Age 11 1) shut door 2) open window 3) grab whistle 4) place 1 green dot per person on window

Age 9 1) shut door 2) open window 3) grab whistle 4) place 1 green dot per person on window

Age 6 1) shut door 2) open window 3) grab whistle 4) place 1 green dot per person on window

STEP
5A

Rally Point (Exit)

Ensure external accountability at external rally point.

Dad	Head straight to 2324 mailbox. Get accountability. Walk external of house and note all green dots.
Mom	Head straight to 2324 mailbox. Get accountability. Walk external of house and note all green dots.
Age 11	Head straight to 2324 mailbox. Get accountability. Walk external of house and note all green dots.
Age 9	Head straight to 2324 mailbox. Get accountability. Walk external of house and note all green dots.
Age 6	Head straight to 2324 mailbox. Get accountability. Walk external of house and note all green dots.

STEP
5B

Rally Point (Collapse)

Ensure external accountability at external rally point.

Dad	N/A
Mom	N/A
Age 11	N/A
Age 9	N/A
Age 6	N/A

SAFE STEPS PLAN: ALAMO

**STEP
5C**

Rally Point (Shelter)

Ensure external accountability at external rally point.

Dad N/A

Mom N/A

Age 11 N/A

Age 9 N/A

Age 6 N/A

STEP
6A

First Responder (Exit)

External extraction if possible and prepare fire fighters for expeditious extraction.

Dad Call 911. Give firefighters dot locations. Use external ladder if available.

Mom Call 911. Give firefighters dot locations. Use external ladder if available.

Age 11 Call 911. Give firefighters dot locations.

Age 9 Call 911. Give firefighters dot locations.

Age 6 Call 911. Give firefighters dot locations.

STEP
6B

Age 9 N/A

Age 6 N/A

REQUIRED EQUIPMENT

	Equipment	Specifications	Key Feature
	Green Self-Adhesive Light	4 hours of illumination 4 year shelf-life	Nontoxic, nonflammable, waterproof
	Survival Whistle	Pealess design 120 decibel	Can be heard from 1 mile away Includes lanyard
	Fire Blanket (40" x 40")	No expiration date	Ideal for grease fires, stovetop fires, grill fires

IMPROVEMENT OPTIONS

	Equipment	Specifications	Key Feature
	Fire Ladder	14-24 feet Weight limit of 365lbs	No Assembly

FIRST RESPONDER SHEET

The First Responder 1 Pager is a single sheet you hand directly to firefighters or police when they arrive at your home, giving them instant situational awareness without you having to communicate under stress.

It tells them who's in the house, where they sleep, any medical conditions to know about, where hazards like firearms and gas shutoffs are located, and how to read the floor plan.

Last updated September 2020

REHEARSAL PROTOCOL

Each rehearsal is timed. After the drill, the family reviews a set of key objectives — 13 for Yellow Brick Road and 17 for Alamo. Each objective completed successfully earns one point. The total points from that session determine whether the iteration counts as a success.

Once a benchmark score is achieved in two consecutive iterations, the family moves to the next rehearsal frequency tier.

Yellow Brick Road Scoring: Weekly=5 points, Monthly=9 points, Quarterly=13 points

Alamo Scoring: Weekly=7 points, Monthly=13 points, Quarterly=17 points

Yellow Brick Road Score Card		
Step	Question	Success?
1 — Alert	1) The cue "Yellow Brick Road" was called immediately by whoever first spotted smoke or flame	
1 — Alert	2) Every occupant relayed the cue without waiting to be told	
2 — Assess	3) Adults evaluated whether the fire could safely be fought before escalating	
2 — Assess	4) Any doubt resulted in an immediate move to step 3	
2 — Assess	5) Children moved to the nearest green dot on their floor without adult direction	
3 — Accountability	6) Dad ran the full Yellow Brick Road and confirmed the location of every person	
3 — Accountability	7) Dad directed each person to their nearest exit before moving on	
4 — Movement	8) Every occupant exited through the door Dad directed them to	
4 — Movement	9) No one stopped to grab belongings or deviated from the directed route	
5 — Rally point	10) All occupants went directly to the mailbox after exiting	
5 — Rally point	11) No one re-entered the house once at the rally point	
6 — First responder	12) 911 was called within 3 minutes of the trigger	
6 — First responder	13) The emergency response sheet was located and ready to hand to firefighters	

REHEARSAL PROTOCOL

Alamo Score Card		
Step	Question	Success?
1 — Alert	1) "Alamo" was called immediately when smoke or flame was identified as blocking movement	
1 — Alert	2) All occupants stopped and assessed their own situation rather than moving automatically	
2 — Assess	3) Every occupant checked their door with the back of their hand before opening it	
2 — Assess	4) Every occupant checked for smoke along the door seam	
2 — Assess	5) Each occupant correctly identified their branch based on their door check result alone	
3 — Movement (Exit)	6) Anyone whose door check was clear moved to their closest exit and went directly to the mailbox	
3 — Movement (Collapse)	7) Children moved to Lucas's room; adults stayed in their own rooms	
3 — Movement (Shelter)	8) Anyone whose door showed heat or smoke stayed in their room and did not attempt to move through the hazard	
4 — Shelter actions	9) Every sheltering occupant shut their door and opened their window	
4 — Shelter actions	10) Every sheltering occupant grabbed their whistle	
4 — Shelter actions	11) The correct number of green dots was placed on the window — one per person, visible from outside	
5 — Rally point	12) Anyone who exited reached the mailbox and established accountability	
5 — Rally point	13) No one who got out re-entered the building	
5 — Rally point	14) Someone walked the exterior and noted the location and count of all green dots in windows	
6 — First responder	15) 911 was called within 3 minutes	
6 — First responder	16) Green dot locations — floor, room, and count — were relayed to the dispatcher	
6 — First responder	17) Firefighters were met at the rally point and briefed on dot locations before entry	

911 SCRIPT

If prompted for answers from dispatcher, answer questions first, then continue with script.

Line	Sentence
Line 1	There is a fire at my home. The address is 1234 Treviso Lane. My name is [name].
Line 2	The fire is located in [room/area/floor]. It [is/is not] spreading.
Line 3 (everyone out of house)	All 5 family members are out of the house. We are located at the mailbox for 1245 Treviso.
Line 3 (people trapped inside)	[#] people are trapped in the house. Their ages are [ages], their locations are marked by glowing green lights on windows.
Line 4	We [do/do not] have injuries.
Line 5	The home has [natural gas/firearms/other hazards] located [location].

POST FIRE INSURANCE DOCUMENTATION

- 1 Call Your Insurer Immediately**
Contact the 24/7 claims line with your policy number to start the clock and unlock ALE coverage.
- 2 Get the Fire Department Report**
Request an official report documenting the fire's cause and extent as critical evidence.
- 3 Document Before Anything Is Touched**
Photograph and video all damage. Do not discard items until the adjuster visits.
- 4 Build a Detailed Inventory**
Record each item's description, brand, model, and replacement value room by room.

- 5 Know Your Coverage**
Understand dwelling, personal property, ALE, and deductible coverage types in your policy.
- 6 Put Everything in Writing**
Copy all adjuster documents and get repair permissions in writing.
- 7 You Can Dispute the Estimate**
Get independent estimates and consider hiring a public adjuster to negotiate.
